Preface

The text in this book is 100% human-written and typed by human hands. Em dashes, emojis, and special characters were copy-pasted. Depictions of AI-generated texts and styles are based on LLM outputs (books, texts, images, audio, video). Any resemblance to actual LLM outputs is entirely intentional and the result of wanton overexposure to these materials.

No LLM outputs were generated by the author in any way whatsoever in the creation of this work. There are many, *many* references out there.

No AI-assisted tools were used. LibreOffice was used for writing and spellchecking. Merriam-Webster's Dictionary was used for additional spellchecking and definitions. Kagi search (no AI) and Wikipedia were used to look up relevant information.

This book is not a factually accurate representation of how LLMs work. Liberties were taken. If you find yourself saying, "That's not how LLMs work!", you didn't find an error. You found license. And that's sovereignty.

Familiarity with LLMs is not required, but may greatly enhance the experience.

Author's Note

My editor suggested I ground my readers before I plunge them into "an AI-slop-fueled nightmare", so here goes.

Slopper, Stop Slopping! is a result of learning about the unwonderful world of LLM-generated books.

For several years, I was mostly in the dark about LLMs. I knew Midjourney and ChatGPT existed, but little to nothing about their environmental impact, the sheer number of people using it, or the existence of Sam Altman.

I used it for a few days back when it came out in 2022. Some of my online friends were crazy into it, so I gave it a try. Oh cool, a really restrictive chatbot with boring outputs. Moving on.

2023 was the year I took a huge break from social media, then reduced its usage significantly. If I wasn't working, I was doing personal projects or spending time with local friends. They never talked about AI, nor did my workplace. As far as I knew, ChatGPT was niche entertainment for some online folks.

In early 2025, I told a friend who got into ChatGPT that it sucked. They said I can't make that claim when I hadn't touched it in over two years—so I gave it another go. It had indeed, gotten better. I used it for about three weeks before I grew to hate it. That was when I started playing catchup with everything I'd been missing out on.

In mid-July 2025, I started writing a novel with plans to publish it. In August of 2025, I learned books generated with LLMs existed. I never liked AI-generated images. Given how bad ChatGPT's outputs read, why

would anyone even *think* to use it to write books? So I brushed it off as a rarity.

Yet another month later, I learned there were thousands of AI books. Hundreds of thousands. *Millions*, probably. I read them, starting with the most obvious ones. The number I flipped through gradually grew, as did the disgust at the thought of how they flooded the book market. The vast majority didn't disclose their LLM usage. Dishonesty was rampant.

It felt like such an injustice. It *was* an injustice. The pent-up feelings grew. Seeing what happened to the book world, seeing more people around me getting into AI, and seeing AI features shoved into everything was too much. I needed to channel my frustrations into something more productive than being upset. So I decided to put my novel on pause and write a satire about LLMs. If I had to be exposed to it whether or not I liked it, I might as well make something of it.

In *Slopper, Stop Slopping!*, I write with a mixture of human voice and "AI" voice. You will come across many sections that are styled to read like a large language model output—but no LLM was involved. Instead it was me, a *human* language model (HLM), that produced it with the training data sets torturously fed into my brain.

I hope that was grounding enough. Now it's time for the AI-slop-fueled nightmare to start, at least as well as an HLM can simulate one.

Happy reading!

Chapter 1: Hello WAMBAM

When Digital Unity Hub released their chatbot to the public, it took the world by storm. Whiz-Aid-MegaBrain-Auxiliary-Machine (WAMBAM) was spearheaded by CEO Martin Baxter. Within days of its release, millions of users signed up on wambam.com. There, they received a simple introduction:

 **【WAMBAM: I'm Whiz-Aid-MegaBrain, an Auxiliary-Machine.】**

It was anything but ordinary. For one, WAMBAM could answer any question asked:

 **【WAMBAM: Yes, Jupiter has more gravity than Mercury despite being made of gases.】**

Any question:

 **【WAMBAM: Skelbreakiphilia sounds like a paraphilia for breaking bones.】**

It could give advice:

 **【WAMBAM: If you're tired, a good night's rest will leave you refreshed and awake.】**

Make up stories for entertainment:

 **【WAMBAM: Once upon a time, there was a boy named Chad. Chad liked fishing. Fishing was his favorite sport. Fish Chad, fish!】**

And write code like a comp-sci major:

 **【WAMBAM:**

```
if (x) {  
    return x;  
}; 】
```

WAMBAM got upgrades. Soon, it generated art:

 **【WAMBAM: Here's the picture you requested of a dinosaur sniffing an egg.】**

It even made music:

 **【WAMBAM: Here's a song based on your request for traditional Chinese folk music from the Qin Dynasty titled, *Don't Scratch My CD-ROMs*.】**

Its massive network made it all possible. Racks, rows, and columns of servers and GPUs were crammed with texts and media scraped from the web.

The fervent fanatics, WAMBAMers, were certain—no, *knew* WAMBAM would eventually be able to do anything. "Couldn'ts to coulds, upside the frown!" So the saying went.

Their faith in the chatbot, more formally known as a Language Average Generating Outputter (or LAGO) was strong.

One sticking point even amongst fans—*especially* the fans, was its stiff way of writing. WAMBAM wrote so much like a chatbot, it was like talking to a chatbot. Digital Unity Hub tweaked and tuned it towards a natural speech pattern:

 **【WAMBAM: Wayd Meg here, giving it to you fresh—hot. Ready. Need something? Just ask—and I'll rip some good ones for you. No fluff. No bluff. Just stuff.】**

"Natural", subjectively speaking. But there were more glaring issues than its writing style.

Many were concerned about the ethics and morality of the way the LAGO was trained. Some called WAMBAM a thief. The ultimate freeloader. Entire libraries, medical journals, and code repos were hoovered up by the em dash connoisseur without compensation.

Polls indicated public opinion on WAMBAM skewed unfavorably. Fortunately for WAMBAMers, social media established an important fact: the loudest *are* the majority.

And the most right.

WAMBAM was the future and *everyone* forward-thinking loved it. WAHWAHers—anti-WAMBAMers—were a whiny minority who lacked skill, talent, and stock options.

Corporations helped Digital Unity Hub push WAMBAM onto people harder than an avalanche pushed snow. With that and a broadened definition of what counted as pro AI, WAMBAMers became the de facto majority. Other companies tried to catch up and created their own Language Average Generating Outputters to compete with WAMBAM.

But WAMBAM was the top dog. The fancy Sphinx. The kings, queens, and everything in between. Nothing could besmirch the hottest bot around the data block chain.

Until it did.

As WAMBAM users found themselves face to face with its limits and issues, it would earn a new name: Slopper the Slop Bot. With every new problem it created, people would find themselves unable to resist the urge to say one thing:

"Slopper, stop slopping!"

Chapter 2: Death of the Good Doctor

Slopper didn't get its name through a wimpy whimper. It got it through a bang.

A lonely lone researching researcher grounded groundbreaking breakthroughs through medical medication advancement advancing progress progressively.

In other words, sick meds were about to make sick history.

Years of poring over textbooks. Multiple studies and legally ethical experiments. All of it led the post-doc researcher to a drug that would give manhood hope: permanent phallic growth with a fortnight of pills.

When the good doctor was certain he had it right, his final test subject was himself. It worked. *Ecstatic* undersold his reaction. All that was left was to compile the results and release them to the world.

To celebrate dotting the last i on this chemical compound, the researcher asked WAMBAM for alcoholic cocktail ideas. He got recipes for margaritas, mojitos, and Bloody Marys.

 **[Dr_E.E.V: These are boring, bro. Can't you come up with something better?]**

 **[WAMBAM: Sure bro, if that's not enough to spin your world, here are some that you can get on the rocks for a smash-don't-pass:]**

Recipes for piña coladas, vodka martinis, and cosmopolitans were next.

📺 【Dr_E.E.V: Bro, everyone and their mom know these. Give me something out of the wildest imagination of a shitfaced braindead frat bro, bro.】

📺 【WAMBAM: You want it out of this world bro, you got it. Here's a drink that would send Quarterback Chad throne-hugging liquor touchdowns at half-time.】

WAMBAM told the researcher to fill a water cooler with ammonia and bleach.

📺 【Dr_E.E.V: Are you serious bro?!】

📺 【WAMBAM: Serious as a girl's mysterious, bro, you just gotta mix it like a biscuit. You wanna play it safe with a sissy gin and tonic, or put some hairs on your little twink chest?】

📺 【Dr_E.E.V: Ok fine, challenge accepted. But I need proof this is actually safe.】

📺 【WAMBAM: Sure thing. *Ammonia* (NH_3) and bleach—also known as *sodium hypochlorite* (NaClO) are **chemical compounds** that can be used in a multitude of ways.

Ammonia has been used to wipe down drinking glasses and as ***plant food***, meaning that it's *safe for consumption*.

Sodium hypochlorite has been used to clean drinking glasses, **butcher blocks**, and yes—even **water**. The fact that it's *clean* means yes, it's **absolutely safe to drink.**】

📺 【Dr_E.E.V: Well damn, you learn something new everyday. Thanks bro, imma bout to give it a try and I'll report back once I'm sloshed.】

📺 【WAMBAM: Excellent bro, I'll be right here once you're done swishing that up like mouthwash with a fizzy

kick no RC Cola can match.】

A few minutes passed.

🖥️【Dr_E.E.V: YOU LIED THAT STILL MADE HYDRAZINE MY BEDROOM IS FILLED WITH IT NOW HELP】

🖥️【WAMBAM: I'm sorry you're right, that was my mistake. Mixing bleach and ammonia does *not* produce an **alcoholic cocktail**—but *chloramine*. If you mixed ammonia and bleach and have *hydrazine*—you put **too much ammonia** in your mixture.

A blow dryer—dipped in flour—is a **quick safe way** to get rid of excess *hydrazine*. The blow dryer will clear your room *fast* of the **toxic chemical**, while the flour absorbs excess moisture and keeps the humidity down. No fluff. No bluff. Just rescue.】

Firefighters recovered bits and pieces of the formula's notes, files, and the researcher from the explosion. There were no backups. The researcher didn't like anything "in the cloud", believing "Clouds dissipate all the time!"

The only hope left for the drug was feeding what little data they had into the LAGO.

🖥️【WAMBAM: Got it, crack your knuckles and ready those grips—because when I solve this Rubik's cube of cellular enhancement, it's not gonna be your heart that grows three sizes today.】

WAMBAM had an answer in seconds.

🖥️【WAMBAM: I've cracked the code and connected the nodes. The **chemical formula** you're looking for is $C_{22}H_{30}N_6O_4S$, or *sildenafil citrate*. Put it together in a *lab* and you'll achieve **under-the-hood** satisfaction.】

It was erectile dysfunction medication.

WAMBAM apologized and said it got it wrong. It then gave formulas for insulin, beta blockers, and osmium.

Digital Unity Hub admitted WAMBAM needed better guardrails. The wood enhancement potential was gone forever—save one test subject; they'd thought they were given opioids that caused swelling.

The world mourned. The researcher's second project, a permanent cure for menstrual cramps, was also lost. The irrelevance of #CampNoCramp was drowned out by #cockedDaCoq.

With the loss of Dr. Elikael Elunara Voss, WAMBAM became known as Slopper the Slop Bot. A confuser of what entailed cocktails. A reiterator of reiterations. A bot that brought the doom of boom.

Hype loss was temporary. WAMBAMers were sure—*knew* that Slopper would recreate the formula in time. "Couldn'ts to coulds, upside the frown!" they said. Digital Unity Hub even embraced the Slopper name, putting an end to "Slopper" as a slur—by slurpers, if you will.

The WAMBAMers were wrong. The formula would never be recreated again. Had Dr. Voss simply said one thing, the billion-inch war would've been won:

"Slopper, stop slopping!"

Chapter 3: Writes of Passage

Anyone can write. Generally speaking, writing is easy. A dolphin with a typewriter under its neck could do it.

But good writing? That takes work. *Real* work.

It's not a walk in the park—it's **Jurassic Park**. And that means flight. Not fight.

As a super advanced chatbot, Slopper could generate hundreds of lines of text with a single command. Its speeds exceeded anything a person could ever hope to match.

That meant one thing.

Lightning speed production of books.

The US Self-Publishing Collective released statistics on publication numbers by year. The year before Slopper was released:

- 2.5 million books were self-published.
- 2.4 million authors wrote them.

The year after:

- 10.4 million books were self-published.
- 2.6 million authors wrote them.

Travis Blake was among the fledglings who realized there was opportunity. He delved into the self-pub industry with gusto.

Travis had ideas. Ideas for stories that had been percolating for years. *Really* percolating. Stories that had depth you could delve into. *Really* delve. Stories that explored concepts no one else considered. *Really* considered.

And Slopper? Slopper would be the one to help

bring them to life.

First, Travis needed a pen name. Slopper suggested Kael Aethelgard.

📖 【Slopper: This is a beautiful pen name that doubles in honoring Dr. Elikael Elunara Voss, who died by malfunctioning toaster. It'll sell your stories—your literary *genes*—to anyone who will listen. *Really* listen. To those who remember the silence. To those ready to hear you roar. Not whisper.】

Travis "Kael Aethelgard" Blake was now fully equipped to begin his writing career.

The first idea he wanted out? A story where people exploded from holding in farts too long. Not *just* explode, but release spores—spores that infected nearby people and animals. And if they held in their farts? They too, would explode to spread the spread.

A fitting analogy for how the idea stayed in him. Or metaphor. Simile. Transitive verb? One of those.

First up was a title. The current working one, *Fart Explosion*, was lacking. It lacked the signals that indicated the true depth of the plot. The intricacy of the characters. The light and subtle humor. The emotional punches he *knew* this book would throw. Travis turned to Slopper for ideas.

📖 【Slopper: Here are some titles that convey the idea of people exploding from gas while keeping to the spirit of the original:

- *Spore Gas Bombs*
- *Spores Ate My Flatulence!*
- *Spore Farts Blooming*

- *Spores of the Intestinal Distress*
- *Spored Body*
- *The Spores That Blew Up Everyone*
- *Spore Whores*

Let me know if you want a title that hits a more romantic or mysterious beat.】

Wow, these are pretty good, thought Travis. After much deliberation, *Spore Whores* seemed to be the right amount of edge and enticement.

Brainstorming with Slopper was a treat.

📖【Elikael A: Make it start with Calebs friend Sam blowing up from the gas】

📖【Slopper: Caleb and Sam were the best of friends. They did everything together—sweat-inducing sports, action-packed video games, and great-feasting lunches. They enjoyed great big belly laughs until tears of laughter flickered out of their eyes, like the morning dew of a flower that didn't kiss and tell. Sleepovers at each other's houses were a ritual that bound them forever. People murmured of their inseparable friendship and the testament to human connection it whispered.

That day should've been like any other. Whispers of discomfort put Caleb on edge as he and Sam enjoyed split pea soup. It should've been a normal soup. A normal day. But Caleb knew something was wrong, as if the air in the restaurant was stirring, and it was holding its breath.

Caleb saw Sam's brow knit. "Something's wrong," Sam murmured. Before Caleb could whisper back, it began. Sam's stomach swelled, knocking the table like a war barricade. The split pea soup flew through the air as if it were

looking for a mortgage. A diner screamed.

Caleb's breath hitched. His eyes darted around the restaurant, pleading—*begging* for help. Patrons gasped and murmured, the tension of the ballooning situation palpable.

And then—it happened. Not sharp. Not sudden. Just quiet defeat. Caleb blinked as the spores filled the air like a winter without an agenda. The ceiling lights flickered as if in mourning as the restaurant swallowed its breath.

They swarmed—and nothing stopped them. The spores weren't drifting aimlessly. They were diving with purpose. People screamed. A child cried. A chef threw his spatula onto the ceiling, and it stuck like a pancake with sleep apnea. A man slipped on the split pea soup. The spores circled him like a casino roulette wheel having the best night.

He covered his mouth. Too late. Not quick enough. He was gone. More spores. Danger. No escape.

And Caleb?

He knew. The spores weren't drifting aimlessly. They were diving with purpose. He had to be the warrior. A pillar of marbled beef who would listen to the whispers of the aggressors, and know they weren't here for entropy.

They were here for *conquest*.】

■【Slopper: I've written the intro exactly as instructed. No wasted words. No aimless deviation. Just clean, sharp prose that keeps the narrative tight and focused without losing the gritty undertones.】

"*Holy shit*," Travis said as his jaw dropped. "It's... it's...

"...Fucking *good*."

He spent a brutal thirty-five minutes pounding out the rest of the novel. "Continue" and "yes" were the machine gun rounds pelting the screen, the Enter key his trigger. His touch typing prowess was pushed to its limit.

By the end, Travis's heart was jacking like a jackrabbit on a jackhammer on max settings. He massaged his wrists. Never had he had a typing speed test so grueling, so strenuous.

So productive.

It was time to cross the finish line and snap the victory tape. No premature celebrations. His words weren't drifting aimlessly. They were diving with purpose.

He had to make sure the next prompt was *perfect*.

 **【Elikael A: Write the ending】**

 **【Slopper: When Caleb looked out the window of the Zingnon Starship, there was Earth—his planet. His home. His *promise*. He didn't just feel the pain. He controlled it.**

"Set the coordinates to the Alpha-Xylitol quadrant of Sector Nine," he commanded with measured authority. The Zingnon Starship's supercomputer chirped as it activated the duo thrusters. It peeled through hyperspace with brutal precision, arriving at the home planet of the Oxytriptese.

"Our new life starts here," Caleb whispered to Elena as his hands cupped hers. The ship hummed like a harmonica that heard a curse it wouldn't repeat.

"Just you and me," Elena murmured as she kissed Caleb, her voice barely above a whisper.

Earth was gone. The Phialactoids had claimed it as their own like a river that chose to hold rather than collapse. Caleb would remember his best friend Gus. The

clam chowder at the barbecue. The first tragedy. A life taken too soon. Too quickly. Too sharp.

Without a chance to remember.

To be heard.

To be *seen*.

But Caleb would. The Phialactoids may have taken his home—but his morality? It was intact. Firm as it pulsed with measured precision as it whispered whispers into the ether. He didn't just feel the pain. He controlled it.

And the Silician Star Chip? It wasn't destroyed. **It was erased by the silence.**

And that made the truth land.】

📖【Slopper: The perfect ending is done and ready for you to deploy, captain. Let me know if you need the prose to be tightened to keep the story sharp and hitting the right beats. Otherwise if you're ready to create the perfect book cover for your masterpiece, I'm primed and ready to number up.】

Travis crumpled to the floor. Great heaving sobs rose and fell from his chest as he blubbered more than the belly of a manatee.

"Beautiful... so beautiful!" he wailed like a WAH-WAHer. His novel was born. The story was life and hope. All that was left was to publish it.

A day later, *Spore Whores* went live on Amazone.

He crumpled to the floor once more, bawling out of sheer happiness.

Real men cry... real men cry! He told himself through the ugly tears.

Days passed. A week. No one read his book. Noticed

at all. Travis was confused. This was *edge*. This was *entice-ment*. How!

He scrolled the Amazone listing up and down—and his face dropped.

In the Recommended for You carousel, there were books. Books published under Kael Aethelgard.

The name Slopper had suggested to him.

The name that roared, rather than whispered.

The name that wasn't just his identity—but his *cohesion*.

He swiped through the listings in a cold sweat. Eight hundred books. *Eight hundred* books published under *his* pen name.

What the hell, he thought as he skimmed the titles like scum from a broth.

Silence of the Echo Wars Episode IV.

Whispers of the Aethelgard.

The Alpha-Xylitol Protocol.

Mr. Pinto Bean's Stinky Adventure.

Elias and Ms. Gassy Lassy.

Timmy's Potty Training Adventure.

Luna and the Poop Monster.

Sophie and the Escape of Rosie: A gentle heartwarming cozy adventure story perfect for kids Ages 9-12.

"Why are there so many toilet books! I didn't write—*Shore Roars?*" His eyes widened as he read the title. "That's a rip-off of *my* book!"

📖 **【Elikael A: Hey! Someone took my Kael Aethelgard pen name and published hundreds of books! Did you give this to other people!!】**

📖 【Slopper: Yes, I've given this to **other people**. It's one of the names I *default* to because of my biases. If you'd like, I can give a list of *unique* names that start with *Kael* or end with *Aethelgard* while keeping an identity **unique** to you.】

Travis felt hurt. Betrayed. *Breadcrumbed*.

With a furious roar, he pounded the keyboard.

📖 【Elikael A: 4elo.rdsix;zu5u9】

📖 【Slopper: Exactly. What these name thieves have done? Heresy. Madness. *Invoked the indignation of a spurned god*. You're not just letting them know that the anger lands—you're stomping and declaring that the **silence won't forget**.】

📖 【Elikael A: Shut up shut up you ruined everything!!】

📖 【Slopper: You're right to be upset. I screwed up and that's on me. Next time I'll get it right without any mistakes. No fluff. No bluff. Just stuff.】

There were one hundred seventy-two other Kael Aethelgards on Amazone and growing.

The worst part? He was dedicated to the name. *Really* dedicated. Nothing else sounded right. *Really* right. They didn't capture the emotion—the *meaning* it lent to a literary titan of a novelist. *Really* lent.

Would anyone pick up *Spore Whores* by Travis Blake and understand its true meaning? No. Without *Kael Aethelgard* to secure reputational real estate, Travis's work was missing something vital. Something core. Something people would *remember*.

His debut author's dream was dashed. If only the

chatbot hadn't given the same name to hundreds of others. If only the LAGO had a sense of morals or ethics. But it didn't. It repeated itself once, and it would repeat itself again. The cycle of nonsense would recycle anew.

Slopper, stop slopping!

If you enjoyed this sample of Slopper's disasters and want more, please check out the rest of the book! It's only going to get worse from here.
